Summary

This notice served as advisement that the Northern Border Regional Commission (NBRC) is issuing a *public interest previously planned project waiver* of the requirements of section 70914 of the Build America, Buy America (BABA) Act (Buy America preference) included in the Infrastructure Investment and Jobs Act (IIJA) (Pub. L. No. 117-58) for the Anson-Madison Sanitary District (AMSD) to upgrade a wastewater treatment facility that was constructed in 1974. The Anson-Madison Sanitary District treats the wastewater generated by the towns of Anson, North Anson and Madison along with trucked-in-waste.

The Anson-Madison Sanitary District received a \$1 million grant from NBRC, obligated in 2020, to upgrade the aeration system for the Anson-Madison Sanitary District’s as part of their multi-year project to upgrade the wastewater treatment facility. On August 15, 2023, AMSD received another \$1 million grant from NBRC to improve the treatment system’s lagoon, chemical storage and delivery systems. This grant assists with the increased costs and financing gap needed to complete construction for this previously planned project. Absent a waiver issued by NBRC, the recipient would need to redesign years of work and continue to incur interest and fees for interim financing and development costs, which continue to grow while construction is delayed. This would lead to adverse environmental impacts and continued contamination of Maine's rivers. In addition, this would drastically increase costs such that it would exceed the project budget, which was developed well before BABA, which could not be foreseen.

The Anson-Madison Sanitary District began construction on this wastewater treatment facility prior to May 14, 2022. The funding for this infrastructure project was approved based on the costs identified in the preliminary engineering report that was completed in 2021.

For the reasons set forth in this notice, NBRC believes that it is in the public interest to issue a limited waiver of Build America, Buy America Act (BABAA) domestic preference requirements for iron, steel, manufactured products and construction materials for this project that was planned prior to the implementation date of BABAA on May 14, 2022, for expenditures made on or after the effective date of the waiver up until December 31, 2025. During the period the waiver is active, NBRC encourages the recipient, to the greatest extent practicable, seek to purchase, acquire, or use goods, products, or materials produced in the United States.

The NBRC posted this notice on June 4, 2024 for a period of 15 days. and encouraged public comments on this waiver, specifically with regard to the proposed length, purpose, and scope. No comments were received and therefore no changes were made to the waiver as issued.

Background

The Buy America preference in section 70914 of the BABA Act included in the Infrastructure Investment and Jobs Act (Pub. L. No. 117-58), requires all iron, steel, manufactured products, and construction materials used for infrastructure projects under Federal financial assistance awards be produced in the United States.

Under section 70914(b), 2 CFR 184.7, and in accordance with the Office of Management and Budget's (OMB) October 25, 2023, implementation guidance memorandum on the subject (M-24-02), an agency may waive the application of the Buy America preference, in any case in which it funds that: applying the domestic content procurement preference would be inconsistent with the public interest. All waivers must have a written explanation for the proposed determination; provide a period of not less than 15 calendar days for public comment on the proposed waiver; and submit the proposed waiver to the Office of Management and Budget Made in America Office for review to determine if the waiver is consistent with policy.

To provide some understanding of how the communities the Anson-Madison Sanitary District serve will be impacted by this waiver, as with many rural communities, capacity issues lengthen the timeframe for the development and design of this project. As a result, the final cost for the project has increased from the original estimate costs identified in the preliminary engineering report that was completed in 2021. When project bids exceed the initial award, the Agency does everything it can to ensure the project can proceed. This is a common practice under federal programs that fund construction projects. Cost overruns are even more likely in the current construction environment, where significant cost increases related to supply chain issues have been seen across the country. This project is a massive undertaking and has been in the planning and design phase for several years. Absent a waiver issued by NBRC, the recipient would need to redesign years of work and continue to incur interest and fees for interim financing and development costs, which continue to grow while construction is delayed. This would lead to adverse environmental impacts and continued contamination of Maine's rivers.

The application of BABAA to this previously planned upgrade to a capacity wastewater treatment facility and the resulting costs are of particular concern for NBRC. This project is now entering the final bid stage and construction is slated to begin this summer. Absent a waiver from

NBRC, the recipient may need to redesign the project, and continue to incur interest and fees for interim financing and development costs, which continue to grow while construction is delayed.

NBRC therefore believes it is in the public interest to issue this waiver with no significant changes from the version that was proposed.

Issuance of Waivers

Section 70914(c) authorizes the Federal Agency head (in the case of the NBRC, the Federal Co-Chair) to waive the application of a Buy America preference under an infrastructure program when:

1. Applying the domestic content procurement preference would be inconsistent with public interest (“public interest waiver”);
2. The iron, steel, manufactured products, or construction materials are not produced in the United States in sufficient and reasonably available quantities or of a satisfactory quality (“nonavailability waiver”);
3. Inclusion of iron, steel, manufactured products, or construction materials produced in the United States will increase the cost of the overall project by more than 25 percent (“unreasonable cost waiver”).

Project details

Federal Agency Office Name: Northern Border Regional Commission

Federal Award Identification Number: NBRC23GBME15

Financial Assistance Listing Name: Catalyst Grant Program

Unique Entity Identifier: N5C7WRLVF889

Non-Federal Entity Name: Anson-Madison Sanitary District

Total Project Costs: \$4,704,500.00

NBRC award amount: \$1,000,000.00

Estimated infrastructure purchases: \$3,704,500.00

NBRC anticipates that the products to be purchased for this project that will be covered under this waiver will include: wastewater treatment equipment, building materials, pipes, valves, heating, plumbing, lagoon liner and aeration system.

Assessment of cost advantage of a foreign-sourced product

Under OMB Memorandum M-24-02, agencies are expected to assess “whether a significant portion of any cost advantage of a foreign-sourced product is the result of the use of dumped steel, iron, or manufactured products or the use of injuriously subsidized steel, iron or manufactured products” as appropriate before granting a public interest waiver. NBRC’s analysis has concluded that this assessment is not applicable to this waiver, as this waiver is not based on the cost of foreign-sourced products.

Christopher Saunders
NBRC Federal Co-Chair
